MB Technologies' Bindows -- The Leading Ajax Framework -- Reaches Holland

Dutch software company, Datheon, joins Bindows Global Partnership Program.

Warner Robins, GA; Barneveld, The Netherlands (PRWEB) July 18, 2006 -- MB Technologies™, developers of Bindows™, the leading development framework for Ajax and Web 2.0 applications, and Netherlands-based Datheon, a premier software company, announced today that Datheon has become a Bindows Global Partner for the Dutch market.

Datheon has chosen Bindows as its framework of choice for developing Ajax and Web 2.0 applications. With Bindows, Datheon is able to match the power of their database solutions with a user-experience that is as rich and responsive as a desktop application.

"Bindows fills the gap between 'traditional' web applications and desktop applications in a very elegant manner," says Mr. Zeppenfeldt, Datheon's CEO. We have been looking for a strong front-end toolbox that matches our flexible metadata platform in order to respond quickly to the continuously changing information needs of our clients. The Unicode support is crucial to us since we are expanding into international markets."

For faster time to market, Bindows' proven and mature object-oriented architecture and its complete toolset enable developers to build powerful Ajax and Web 2.0 enterprise applications with extremely rich GUIs that interoperate with any backend platform, server, operating system, and major web browsers.

"We're proud to have such an advanced partner in Holland – an extremely important, emerging Ajax market," said Ran Meriaz, president, MB Technologies. "Datheon brings to the table outstanding development, data integration and consulting capabilities. By aggressively expanding our network of international partners and list of large enterprise clients, we're proving that Bindows is the framework of choice for building zero-footprint, rich-GUI, Ajax and Web 2.0 enterprise applications."

About MB Technologies
In 2002, MB Technologies developed the Bindows Ajax framework to deliver the United States Air Force mission-critical, zero-footprint applications based on a programming concept that was later termed Ajax. Bindows now leads the market as the premiere Ajax framework for building zero-footprint enterprise web applications that are as rich and complete as any modern desktop application. MB Technologies is headquartered in Warner Robins, Georgia, USA with its main development center in Goteborg, Sweden. Please visit Bindows at www.bindows.net or blog.bindows.net.

About Datheon
As an authorized Bindows reseller, Datheon will provide consulting, training and support services for Bindows to the emerging Dutch Ajax market. Datheon is a provider of web based metadata platforms that allow users to store and manage any data without writing a single line of code. The Datheon Vista Project Suite takes collaboration over the web to a new level, by a seamless integration of numerous modules that can be tailored to fit any information requirement. Please visit Datheon at http://www.datheon.com/asp/basis.asp?lng=En or www.bindows.nl (in Dutch)
